

POOL EMERGENCY FIX - QUICK REFERENCE GUIDE

CLOUDY WATER - EMERGENCY FIX STEPS

1. Test pH and Chlorine immediately.
2. Brush walls and floor thoroughly.
3. Clean or backwash the filter.
4. Add clarifier if LSI is balanced.
5. Run pump continuously for 24 hours.
6. Retest water after 24 hours.

GREEN POOL - EMERGENCY FIX STEPS

Get the frog(s) out first then...next page

1. Test and record pH, chlorine, and CYA levels.
2. Shock the pool (high chlorine dose).
3. Brush all surfaces twice daily.
4. Maintain high chlorine until green disappears.
5. Vacuum debris and backwash filter.
6. Check LSI and rebalance if needed.

SCALING - EMERGENCY FIX STEPS

1. Test LSI - likely above +0.5.
2. Lower pH to ~7.2-7.4 to reduce scale formation.
3. Add a scale remover (sequestrant) if needed.
4. Brush affected areas gently.
5. Balance CH and TA within target range.
6. Monitor and retest weekly to stay in LSI zone (-0.3 to +0.3)
